

The image shows a large, empty rectangular box with a stepped top-left corner. The top-left corner is defined by a horizontal line extending from the left edge, followed by a vertical line extending upwards to meet the top edge, and then a horizontal line extending from that point to the right edge. This shape is intended to be filled with a multiplication table, where the grid lines from the 10x10 grid on the left align with the stepped corner of this larger box.
